WHEN IT RAINS, IT DRAINS. AND IT HAS TO GO SOMEWHERE

Water from inside our homes goes to a wastewater facility for purification. But water from roofs, streets, and outdoor spigots goes untreated directly into storm drains - straight to our waterways - picking up all kinds of contaminants along the way!

Excess nutrients, specifically nitrogen and phosphorus, pollute stormwater run-off from urban areas, contributing to the third greatest cause of lake deterioration in the US.

DID YOU Leaf "litter" and landscape trash accounts for 56% of phosphorus in urban stormwater, not to

mention clogging storm drains, causing potential flooding and increasing debris in our waterways.

The amount of phosphorus in grass clippings from mowing your lawn just once can produce up to **100 lbs.** of unwanted algae if it ends up in our lakes and ponds.

Just one pound of fertilizer over-application on the average lawn can equate to 34.2 lbs. of excess algae growth in streams and lakes.

DID YOU When you wash your car in the driveway, NOW you're washing about 120 gallons of grime-filled water downstream. The soap, together with the dirt, grease and grime flows

untreated into nearby storm drains, which runs directly into lakes and streams.

If dog owners don't clean up after their pooches, 390 million pounds

of poop can wash into our waterways every year just in Colorado! Dog waste contains 10% phosphates and 2% nitrates, contributing to algae growth.

WHY IT MATTERS

Too many nutrients in streams and lakes cause rapid growth of algae.

Algae looks bad, smells bad, degrades water quality and can be harmful to your health.

> As algae decays, it uses up oxygen in the water, leading to a decline in o drinking water quality and makes it more expensive to treat.

WHAT YOU CAN DO

Dispose Properly

- Compost or bag your leaves and lawn clippings
- Don't blow leaves or lawn clippings into the street
- Sweep up any spills or overspray of fertilizers on sidewalks or streets

Fertilize Efficiently

 Always follow the manufacturer's application recommendations. More isn't better!

Min

Fertilizing in the early fall promotes healthy root systems — leading to stronger, more resilient lawns and plants

Be Car Smart

- Use a commercial car wash, where water is recycled and sent to treatment facilities
- Wash your car on the lawn or gravel
- Dump your soapy bucket in the sink

Pick It Up & Pitch It

Clean up dog waste and dispose properly
